SIT782 Individual Retrospective

My Target Grade: High Distinction

Pass Conditions:

Completes all relevant tasks for this grade in OnTrack

I have completed and submitted all the tasks on OnTrack till this week i.e. week 7. 2 tasks have been marked as Complete, 8 tasks are yet to be marked and also awaiting supervisor feedback on these tasks.

Attends at least 80% meetings with supervisor, or has supervisor approval for absence

I have attended all supervisor meetings i.e. I have 100% attendance in our weekly meetings with the supervisor. Whenever the meetings have been on-campus I have attended them in person or if it's on skype then I have attended online on skype business.

Evidences at least 8 hours of work per week overall

As discussed in the supervisor meeting last week I have been working 8 hours a week and been able to show my work to the supervisor on skype meetings and in person. I have been doing the backend part for human activity like creating and storing the project details, adding a new project and listing of those projects.

Conducts self in a professional and respectful manner, based on issues raised to/from supervisor

I plan to satisfy this by showing the professional behaviour towards my groupmates to ensure that no one has troubles from me and my work. If there are any issues I will discuss with my team members and supervisor and solve the issues making sure it does not affect myself, groupmates and work.

Credit Grade Conditions:

Demonstrates more than 75% productive contributions in Work Log by supervisor standards to the team project

As from the last week's work log I have demonstrated more than 16 hours of work on this project which was also discussed in the supervisor meeting. After discussing the

solution with the supervisor, he gave some suggestions to implement which I have tried to include in my solution.

Work contributed is relevant to the project via successful integration or presence in the final deliverable

I have been working on the backend in node that is supposed to create API's for the frontend and I have already developed a login functionality with proper error message being sent to the front end. Moreover, have also added authentication in the routes which would prevent not logged in users to access different routes.

Actively work to support other team members to achieve team and project goals

I have demonstrated the capacity to show ownership and support for my colleagues by currently staying aware of assignments out of the extent of my venture part. Me and my colleagues have defined objectives and dates to accomplish particular tasks.

Distinction Grade Conditions:

Takes ownership of component(s) while effectively self-managing time and risk in estimations

I have taken ownership in the backend which is been developed in node. Moreover, I did some research and a small POC to determine if there were any future risks involved in the using the technology. The main purpose of the python server is expose different API's to the frontend for different functionalities like creating a project, login etc.

Actively works to support other team members to achieve their individual targeted grading goals

In this Sprint, I worked closely with Taiye, Himani and Karan. We are working on the backend piece of the project wherein Taiye is focussing on the security part and have been working with Karan and Himani for integrating login screens and create a project screen.

Deliver work of higher than functionally required quality

For delivering the backend server with the functionality of login and authentication I used passport package with has the ability to do social logins as well and also provides with router level authentication.

High Distinction Grade Conditions:

Condition

Evidence of my presence of my work can be found in my status update, Trello and checklist document (will be submitted next sprint).
